Overview Voimakas PST Upgrade

And Downgrade allows you to convert a specific type of PST file to a new format, or vice versa, using the Windows GUI. You can easily choose the type of file format that you want to convert from and to, and you can check the file properties of each one. After choosing all the files that you want to convert, the program shows you their path, size, and file format. If you wish to exclude duplicate items or trash files, you can set the priority level of those items during the conversion.

Features: File conversion between Unicode and ANSI Imports items by drag and drop Conversion excludes duplicates or deleted items You can check the original format, size, and path of each file Only one of the conversion options is active at any given time The operation will be performed automatically for each selected file The program provides documentation
