Q: React - Error creating new component.

Fails when using copy/paste code of working example I'm following an online React tutorial here:

So I have this component: `class ActorRow extends Component{`

`constructor(){ super(); this.state`

`= { pos : [0,0,0] }; } ... }` This works fine, since I'm able to build it.

Then I copy/paste the exact code from the tutorial and it fails.

`class ActorRow extends Component{ constructor(){`

`super(); this.state = { pos : [0,0,0] }; } ... }`

What's going wrong here? A: In your second

case, you're calling `super()` which means you're passing a `ReactComponent` instance to its constructor.
